EL ACERO INOXIDABLE

Para la fabricación de nuestros accesorios de baño, se emplea el acero inoxidable AISI 304.

Los distintos tipos de acero inoxidable, son aleaciones a base de hierro, cromo, carbono y principalmente níquel, molibdeno, manganeso, silicio, titanio... etc. que les confiere una resistencia particular a diversos tipos de corrosión.

Existen aceros inoxidables ferríticos como el AISI-430, que incorporan mayor contenido en cromo pero disminuyen la cantidad de carbono, por lo que, a pesar de que muestran una alta resistencia a la corrosión no están recomendados para lugares con alta contaminación industrial y nunca para zonas marinas.

Nuestro acero inoxidable AISI-304, está dentro de la familia de los de tipo austenítico, que son los más comúnmente empleados. Incorporan níquel a su composición química. Poseen una buena resistencia a la corrosión, buena soldabilidad, excelente conformabilidad, son endurecibles por precipitación pero no son modificables por temple.

El AISI-304, es muy empleado para accesorios domésticos, pero también para exteriores como en marquesinas publicitarias, carritos de supermercado y aeropuertos, estructuras metálicas para naves y pabellones, tubos de torres de ventilación y diverso equipamiento urbano.

Dentro de los aceros inoxidables tipo austenítico, existe también el AISI-316, que se distingue del 304 por incorporar molibdeno en su composición, lo que le confiere una mayor resistencia a la corrosión por picaduras y mejor comportamiento frente a la corrosión bajo tensiones. Está especialmente indicado para zonas externas costeras, barcos y, en general, para contacto con agua marina.

STAINLESS STEEL

For the manufacture of our bathroom accessories, we use the stainless steel AISI-304.

The different types of stainless steel alloys are based on iron, chromium, carbon and mainly nickel, molybdenum, manganese, silicon, titanium, etc.... which confers a particular resistance to various types of corrosion.

There are ferritic stainless steels such as AISI-430, which incorporate higher chromium content but reduce the amount of carbon, which, despite showing a high corrosion resistance are not recommended for sites with high industrial pollution and never for marine areas.

Our stainless steel AISI-304, is within the family of the austenitic type, which are the most commonly used. Incorporate nickel to its chemical composition. Have good corrosion resistance, good weldability, excellent formability, are hardened by precipitation, but are not affected by tempering.

The AISI-304, is used for home accessories, as well as outdoor advertising on bus shelters, airports and grocery carts, metal structures for buildings and pavilions, towers, ventilation tubes and diverse urban facilities.

Within the type austenitic stainless steels, there is also the AISI-316, which differs from the 304 to incorporate molybdenum in its membership, which confers greater resistance to pitting corrosion and better performance against corrosion under tension. Is particularly suitable for areas outside coastal boats and in general contact with seawater.

Sin embargo, y a pesar de su alta resistencia a la corrosión, no debemos olvidar unas normas básicas de mantenimiento para que la superficie del inoxidable tenga una buena presencia sin restos de contaminantes ni manchas.

El acero inoxidable basta con limpiarlo con agua y jabón, después debe de secarse bien la superficie para evitar que se queden depositadas partículas contaminantes como restos de jabón o cal, que pueden producir manchas en la superficie, que en ocasiones pueden dar incluso sensación de óxido a la pieza.

Nunca deben emplearse estropajos de ningún tipo, porque muchos de ellos contienen materiales metálicos que contaminan el acero inoxidable, depositando pequeñas partículas que con el tiempo producen poros y óxido en la pieza. Además, si la pieza tiene acabado brillo-espejo los estropajos rayarán la superficie.

Si con el tiempo se observan manchas o pequeñas rayas se debe tratar la superficie con un pulimento para metales fino o con un limpiador específico de acero inoxidable. Siempre aplicado con paños de tela fina, a poder ser de algodón.

However, despite its high corrosion resistance, we must not forget some basic rules for keeping the surface of stainless steel has a good presence free of contaminants or stains.

Stainless steel lipi enough with soap and water, then drying to the surface well to avoid contaminants such as particles are deposited the remains of soap or lime, which can cause stains on the surface, which sometimes may even feel the oxide the piece.

They should never be used rag of any kind, because many of them contain metals that contaminate the stainless steel, depositing small particles that eventually produce pores in the oxide component. Also, if the piece is the mirror-glossy rag will scratch the surface.

If time is observed with spots or small stripes should be treated the surface with a fine metal polish or cleaner with a special stainless steel. Always applied with thin pieces of fabric, possibly cotton.
